Abstracts

Global Rigid Endoscopes Market is valued at approximately USD 5.60 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7.10% over the forecast period 2022-2029. Rigid endoscopes have an extensive range of exterior diameters, from 1 to 12 mm, and are made of metal tubes that house the lenses and light channel. Usually, high-resolution optical glass rod lenses are found on rigid endoscopes. The Rigid Endoscopes Market is expanding because of factors such as rising demand for minimally invasive surgical procedure and the growing prevalence of chronic diseases across the world.

Several people around the world struggle with chronic conditions such as endometriosis and liver cancer. According to WHO factsheets from 2021, endometriosis affects over 190 million women worldwide who are of reproductive age. Similar to this, one of the most typical tumours detected in the female reproductive system is uterine fibroids (UFs), also known as uterine leiomyoma (UL), fibroma, or leiomyoma. For instance, a recent study in 2022 indicates that the possibility of having UFs is projected to be between 20% and 77%; the likelihood of having this condition is estimated to be between 40% and 60% among women under the age of 35 and to be between 70% and 80% among women over the age of 50. The increased prevalence of these illnesses is anticipated to enhance laparoscopic treatments in the future and hence promote the demand for rigid endoscopes. In addition, increasing healthcare spending and rising

prevalence of gastrointestinal and gynecological cases and rising FDA approvals is catering for the market growth. However, the high cost of rigid endoscopes may halt market growth.

The key regions considered for the Global Rigid Endoscopes Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the dominance of branded products and the region's increasing disease prevalence. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising geriatric and target populations, an increase in the number of collaborations for product development, and the geographic expansion of key players.
