Abstracts

Global Road Safety Market is valued approximately at USD 2.88 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 12.4% over the forecast period 2021-2027. The global Road Safety market is being driven by increasing road accidents and fatalities as well as injuries caused by the accidents. For instance, according to World Health Organization data of 2018, around 1.35 million people die every year due to road accidents. Also, road traffic injuries are the leading cause of death for children and young adults aged 5-29 years. Another major driving factor for the market is the favorable government initiatives in encouraging awareness about road safety. For instance: in April 2021, government of India announced to set up National Road Safety Board in order to advise the government for the policy formulation related to road safety. Furthermore, the growing investments by the road safety companies and technology upgradations to innovate new products will provide new opportunities for the global Road Safety industry. However, lack of standardized and uniform technologies may impede market growth over the forecast period of 2021-2027.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are segmented for the regional analysis of the global Road Safety Market. Europe is the leading region across the world in terms of market share due to state-of-the-art road infrastructure and technological advancements in the region. Whereas North America is anticipated to exhibit the highest CAGR over the forecast period 2021-2027 due to the growing investment in infrastructure along with the rising adoption of Internet-of-Things and automation technologies in the region.
