Abstracts

Global Robotic Pool Cleaner Market is valued approximately at USD XXX Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 18.05% over the forecast period 2021-2027. Robotic pool cleaner is a device which automates the process of cleaning a swimming pool. It consists of a motor, on board pumps, polyester filter, cartridges and remote control. The expansion of global hospitality industry has led to an increase in construction of hotels with swimming pools which in turn drives the market for demand for robotic pool cleaners. Also, the demand for these robots is rising in commercial and residential applications because of advantages such as minimal maintenance cost and easy installation. However, the availability of low-cost alternative pool cleaning devices, such as skimmer nets, pool brushes and leaf bagger, is restricting the use of robotic pool cleaning systems. Manufacturers are integrating innovative technologies because of changing and growing consumer demand for low-cost autonomous cleaning systems which gives the opportunity to the market. The increased adoption of robotic pool cleaner systems across the globe are giving opportunities to the market because these devices are programmed to clean every part of the pool without human intervention which reduces the chances of human-related accidents such as slipping and drowning.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are considered for the regional analysis of global Robotic Pool Cleaner market. North America is the largest market whereas Asia Pacific is anticipated to grow with a significant CAGR in the forecasted period.
