## **Abstracts**

Global Root Canal Sealer Market is valued approximately USD xx billion in 2020 and is anticipated to grow with a healthy growth rate of more than xx % over the forecast period 2021-2027. Root canal sealers are used to close the gap between the dentinal wall and the obturating core. Root canal sealers cover voids and abnormalities in root canals, lateral and accessory canals, and lateral condensation, as well as the area between core and accessory filling materials. It also works as a lubricant and antibacterial agent during the obturation process. Increased need for root canal treatment, owing to an increase in the frequency of dental diseases, fuels demand for sealants and propels the market forward. Furthermore, the rise in the elderly population is one of the major reasons driving the root canal sealer market, since the dentition changes with age, such as enamel wear, enamel chipping, development of fracture lines, discoloration of the chipped regions and fracture lines, and dentin exposure. Furthermore, advances in root canal sealers are fueling the worldwide root canal sealer market's expansion. Furthermore, the rise in dental tourism in emerging markets provides an opportunity for manufacturers to enter into and profit from the industry. Limited reimbursements for dental operations and the high cost of root canal therapy are some of the factors limiting market expansion. According to the 2020 census,

China's population of persons aged 60 and over is estimated to be 264 million (18.70%). As a result, such elements contribute to the region's market growth.

The main regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical analysis of the worldwide Root Canal Sealer market. Economic growth and cheap operational costs, Asia-Pacific is anticipated to expand at the quickest rate throughout the forecast period, providing profitable possibilities for major players in the root canal sealer market. Furthermore, an increase in the frequency of dental caries in children as well as increased public awareness about oral health and hygiene are driving market expansion in this area. Caries frequency in children varied from 40–97 percent in Eastern Asia, 38–73.7 percent in Southern Asia, and 26.5–74.7 percent in Western Asia, according to a study published in the National Library of Medicine in 2019.
