## **Abstracts**

Global Sailboat Propellers Market is valued approximately USD xxx billion in 2022 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2023-2030. Sailboat propellers are designed to provide power and maneuverability to a sailing vessel when the wind alone is not enough to move it. The propeller is typically mounted on the sailboat's shaft, which is connected to the engine, and is used to propel the boat forward or backward. The Sailboat Propellers market is expanding because of factors such as increasing maritime trade and growing water sports activities. There are several types of sailboat propellers, including fixed-blade, folding, and feathering propellers. Fixed-blade propellers are the most common and are permanently attached to the shaft. Folding propellers are designed to fold up when not in use, which reduces drag and improves sailing performance. Feathering propellers have blades that can rotate independently of each other, which allows for more efficient propulsion. Its importance has progressively increased during the last few decades.

According to the United Nations Conference on Trade and Development, in 2021, global maritime trade increased. To achieve 11 billion tons, shipments are anticipated to have increased by 3.2%. Compared to the 3.8% decline in 2020, this indicates an improvement of 7 percentage points. Furthermore, Asia, which remained the world's top maritime cargo handling hub and accounted for 42% of items loaded and 64% of those unloaded in 2021, saw an increase of approximately 5.6% in Africa, 3% in Latin America and the Caribbean, and 3% in Asia. Another important component driving space increase is water sports activities. As per Statista, in 2021, the share of people aged six years and above were doing water sports amounted to approximately 14 percent. In

In addition, the U.S. state of Florida had the highest number of registered recreational boating vessels in 2021, with approx. 987 thousand in total. Also, rising investments in R&D to save fuel consumption and rising technological advancement in propellers would create a lucrative growth prospectus for the market over the forecast period. However, the high cost of Sailboat Propellers stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Sailboat Propellers Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific dominated the market in 2022 owing to the growing demand for frigates and corvettes from emerging economies, such as India and China. According to the Statista, in 2021, China accounts the highest amount of national flag vessels in the Asia-Pacific region, with the total reaching approx. 4.89 thousand in number. Furthermore, Europe is expected to grow significantly during the forecast period, owing to factors such as increases the demand for passengers for cruise ships' yachts and increasing presence of many marine interior players in France, Germany, and United Kingdom in the market space.
