## **Abstracts**

Global Saliva Collection and Diagnosis Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2029. Saliva Collection and Diagnosis is an alternative to serum-based testing. It has major applications owing to the factors such as ease of collection, its non-invasive nature offers minimal risk of cross-contamination. It has major advantages across various diseases such as autoimmune diseases, cardiovascular diseases, diabetes, HIV, cancer, caries, and periodontal diseases. The Saliva Collection and Diagnosis market is expanding because of factors such as the increasing incidence of infectious diseases and the growing application of non-invasive saliva testing over blood testing. Its prevalence has progressively increased during the last few decades.

According to the World Health Organization (WHO), in 2021, around 60% of the population is suffering from infectious diseases globally. It is noted that around 17 million people are dying from infectious diseases per year. The global burden of infectious diseases is rising rapidly in the forthcoming years which surges the market demand. Also, according to the World Health Organization in 2021, around 537 million adults were suffering from diabetes globally. The geriatric, and obese populations are predisposed to chronic diseases. According to the World Bank Group, about 727 million in 2020 were above 60 ages and it is predicted to treble over the next three decades,

reaching 1.5 billion in 2050. Whereas, rising government awareness and spending towards infectious diseases and increasing initiatives and innovations by market players create lucrative opportunities for the market in the forecast period. However, the higher cost of collection devices hampers the market growth in the forecast period of 2022-2029.

The key regions considered for the Global Saliva Collection and Diagnosis Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the space in terms of revenue, owing to the increasing prevalence of infectious diseases, rising preference for saliva tests and penetration of market players, etc across the region. Whereas, North America is expected to grow significantly during the forecast period, owing to factors such as rising government awareness and spending on controlling infectious diseases in the forecast period.
