Abstracts

Global Sand Control System market is valued approximately USD 2.48 Billion in 2018 and is anticipated to grow with a growth rate of more than 3.5% over the forecast period 2019-2026. Sand control system is referring to the installation of equipment or application of techniques in order to prevent migration of reservoir sand into the wellbore or near by wellbore area. It is necessary to maintain the structure of the reservoir around the wellbore. The ease of drilling and production for oil reservoirs, rising number of wells drilled, high day rates of offshore rigs and increasing drilling activities in Asia pacific are the factors driving the growth of market over the forecast years. Whereas, large stockpiles of crude oil are the factor hampering the growth of market over the upcoming years. However, new oilfield discoveries and re-development of aging reservoirs is a lucrative opportunity for the market growth.

The regional analysis of global Sand control system market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific accounts for the largest share in the global sand control system market due to the presence of oil & gas potential reserves and increasing drilling activities in the region. Similarly, Asia Pacific is the fastest growing region in the global sand control system owing to the rise in growth of economy of developing countries such as Australia and China and rise in government support in oil & gas industry.
