## Abstracts

Global Sarcoma Drugs Market is valued approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Sarcoma is a type of cancer that can appear anywhere on the body. Sarcomas, also referred to as soft tissue sarcomas, are a broad category of tumors that develop in the bones and soft tissues. Soft tissue sarcomas form in the tissues that connect, envelop, and support other body structures. The muscle, fat, blood vessels, nerves, tendons, and joint lining make up this framework. There are more than 70 different types of sarcoma. The way that the sarcoma is treated will depend on the type, location, and other factors. Malignant bone tumours and soft tissue sarcoma are two conditions for which sarcoma drugs can be used. Soft tissue sarcomas include rhabdomyosarcoma, synovial cell sarcoma, leiomyosarcoma, and dermatofibrosarcoma. Chemotherapy, targeted medication therapy, and other procedures are part of the sarcoma treatment. The key factor driving the market growth is rise in the prevalence of soft tissue sarcoma, increasing number of product approval for new sarcoma drugs, and growing adoption of key strategies such as acquisition, collaboration, agreement and partnership by key market players that anticipated to support the market growth during forecast period.

Moreover, the rising prevalence of soft tissue sarcoma is anticipated to create the lucrative demand for the sarcoma drugs market. For instance, The American Cancer Society estimates that 12,750 new cases of soft tissue sarcoma will be identified across the country, 7,240 of which will be male and 5,510 of which will be female. According to this society's estimates of mortality, 5,270 Americans are predicted to die by sarcoma in 2019. It has been reported that about 40 people in 1 million have Sarcoma in the United States yearly. Additionally, rising investment for the research and development of

sarcoma drugs is anticipated to create the lucrative opportunity for the market during forecast period. However, the high cost of Sarcoma Drugs stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Sarcoma Drugs Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the dominating region across the world in terms of market share, owing to the presence of key market players, rising the number of research activities, growing technological advancement in the healthcare sector and increasing the prevalence of soft tissue sarcoma in the region. Whereas, Asia Pacific is also anticipated to exhibit highest growth rate over the forecast period, owing to factors such as increase in expenditure by government organization to develop healthcare sector, rise in prevalence of cancer and growing the number of sarcoma drugs industry would create lucrative growth prospects for the Sarcoma Drugs market across Asia Pacific region.
