Global Satellite Based Augmentation Systems (SBAS) Market is valued approximately USD 559.1 million in 2022 and is anticipated to grow with a healthy growth rate of more than 5.0% over the forecast period 2023-2030. Satellite-Based Augmentation Systems (SBAS) are regional or wide-area augmentation systems that enhance the accuracy, integrity, and availability of Global Navigation Satellite Systems (GNSS) signals, such as GPS (Global Positioning System). SBAS works by deploying a network of ground-based reference stations and geostationary satellites to transmit correction messages to GNSS users. The Satellite Based Augmentation Systems (SBAS) market is expanding because of factors such as rise in adoption of unmanned aerial vehicles (UAVs) and autonomous vehicles and increase in demand for precise positioning and navigation in various industries.

The necessity for precise positioning data has increased with the development of autonomous vehicles, including drones and self-driving cars. This data can be provided by SBAS technology, aiding in the maintenance of these vehicles' dependability and safety. For instance, in February 2021 General Motors announced to collaborate with

the start-up business Cruise to test self-driving vehicles in San Francisco. The vehicles are going to feature SBAS technology to deliver precise positioning data, which is necessary for dependable and safe autonomous driving. Furthermore, the European Space Agency has introduced a new SBAS system called EGNOS that will provide precise positioning information to driverless vehicles in Europe. The system is meant to improve navigational accuracy and dependability, especially in areas where GPS signals may be spotty or weak. Thus, rising adoption of SBAS system in automotive industry is fostering market growth. In addition, advancements in satellite technology and increase in investments by governments and private companies in the development of SBAS infrastructure is creating lucrative growth to the market. However, the high cost of implementation and maintenance stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Satellite Based Augmentation Systems (SBAS) Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to presence of key market players, rising technological advancements, and rising adoption of technology in various industries. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as rising adoption of autonomous vehicles and active participation of government in the market space.
