Global Satellite Modem Market is valued approximately USD 356.52 million in 2020 and is anticipated to grow with a healthy growth rate of more than 6 % over the forecast period 2021-2027. Satellite modem is a device which used to convert and receive signals from a satellite transponder. For transmission, it modulates digital data encrypted signals from a device into a carrier (transporter) frequency for delivery to an upconverter, amplifier and antenna. Continuous innovations, rising need for high-speed data communication and growing investment in satellite launching has fueled the market growth across the forecast period. The rising demand for satellite communication is due to increase in telecommunication industry for high speed secured connection. For instance, NSIL in India, the government's commercial space arm, plans to invest Rs 10,000 crore over the next five years to own and operate satellites as well as launch rockets. However, lack of international regulations impedes the growth of the market over the forecast period of 2021-2027. Also, the increasing technological advancements, are likely to create new opportunities for the market during the forecast

period.

Global Satellite Modem Market is segmented on the basis of geographical region as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the technology advancements and major satellite launching enterprises such as SpaceX and NASA located in this region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2021-2027. Factors such as increasing investment in satellite launching stations and rise in demand for high-speed data would create profitable growth prospects for the Satellite Modem Market across Asia-Pacific region.
