Abstracts

Global Sciatica Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than 9.5% over the forecast period 2022-2028. Sciatica is a medical ailment that causes moderate to severe pain along the sciatic nerve, which flows from the lower back through the hips and buttocks and down to the legs. It usually occurs when a herniated disc, a bone spur on the spine, or spinal stenosis compresses a portion of the nerve. The market is driven by the risk factors and increasing elderly population and increased public awareness and high survival rate of sciatica. According to the Centers for Disease Control and Prevention, over three out of five persons (58.9%) in the United States had pain of some type in the previous three months of 2019. Back pain affected 39.0 percent of adults, 36.5 percent of adults had lower limb pain, and 30.7 percent of adults had upper limb pain. The incidence of pain in each of these areas rose with age, with the highest frequency among individuals aged 65 and more. Men and non-Hispanic Asian people had the lowest pain prevalence in each of these areas. Furthermore, high expenditure on healthcare boosts the market opportunities in the coming years. However, several off-label drugs and physical therapy in the market impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Sciatica Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is leading the market shares globally and is expected to be the fastest growing region in the forecast years, owing to favorable demand for disease-specific novel treatment and
