Global Semiochemicals Market reached USD XX Billion in 2020 The Global Semiochemicals Market tends to grow by CAGR of XX% in the 2021-2027 period. Semiochemical is a kind of organic pesticide that helps the farmers to boost their crops and grow organic vegetables and other products. The growing demand for organic foods to reduce the risk arising from using chemicals pesticides and fertilizers is boosting the demand for bio based and sustainable pesticides. The global agriculture system is actively moving towards organic products because of high demand from the population; for that, organic pesticides are utilized for the effective elimination of pests. This, along with that growing demand for high yield crops is going to boost this market in the near future. Lack of knowledge of infrastructure and the pesticide uses in the crops are major restraint for this segment. Increasing consumption of organic produce is an opportunity for this market as high number of players contributing to the market thus, positively impacting the market growth. For example, in 2019, US and Brazil based ISCA Technologies announced a merger with Indian ATGC Biotech to form ISCA Global that aims to focus on research and development of insect control and less pollutant environmental pesticides.

The growth of Semiochemicals in Asia pacific region is primarily attributed to the awareness among the population regarding the production of high yield crop and its protection. In the regional analysis, North American market size stood at USD 1.03

Billion in 2020 and is predicted to lead the market over the forecasted period. This is because of various government measures and interventions taken to promote the growth of sustainable pesticides. Europe held the second position in the market size globally under organic farming due to the high demands from their major countries including UK, France, Italy, and Germany.
