Global Service Dispatch Software Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Service Dispatch Software is a computer application system which is utilized to automate routing and scheduling of business processes. Service Dispatch software automatically assigns jobs to field service technicians and facilitates real-time tracking of business processes thus improving overall business productivity. The application of dispatch software offers various benefits such as optimizing scheduling, increasing technician productivity, and improving customer experience among others. The growing expansion of software as a service (SaaS) platforms and increasing demand for real-time tracking of business activities as well as strategic initiatives from leading market players are key factors accelerating the market growth.

According to Statista – in 2021, the global software as a service (SaaS) market was estimated at USD 152 billion, and as per projections, the market would grow to USD 208 billion by 2023. Also, rising deployment of cloud-based systems and growing advancements in Service Dispatch Software would create lucrative growth prospectus for the market over the forecast period. However, high deployment costs associated with Service dispatch software coupled with lack of awareness of Dispatch software solutions impede the market growth throughout the forecast period of 2022-2029.
