Global Shipbuilding Anti-Vibration Market is valued at approximately USDXX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Shipbuilding Anti-Vibration is a product that is specifically designed to eradicate undesirable vibration and noise that causes in the shipbuilding. The growth in international marine freight transport, increase in commercial trade activities, and rising adoption of shipbuilding anti-vibration in applications such as container ships, fishing boats, motorboats, bulk carriers, and many others are the key factors excelling the market demand across the globe. For instance, according to Statista, in 2020 the global shipping container market is estimated to account for around USD 6.41 billion and the amount is projected to reach USD 15.87 billion by 2028. Therefore, the prosperous development of the shipping container market is positively influencing the demand for shipbuilding anti-vibration, which, is accelerating the market growth in the approaching years. However, the high maintenance costs and replacement rate required for anti-vibration products and instability in raw materials prices impede the growth of the market over the forecast period of 2022-2028. Also, increasing e-commerce and online trade activities and rising investments in the development of shipbuilding anti-vibration are anticipated to act as catalyzing factors for

the market demand during the forecast period.
