## **Abstracts**

Global Shopping Centers Market is valued at approximately USD 5231.63 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.90% over the forecast period 2022-2029. Shopping centres are becoming more and more common because they house a wide array of goods from various vendors or retailers, including clothing stores, food stores, and much more. This is the main element fueling industry expansion. Shopping malls also give customers a better overall experience by giving them access to a variety of activities like new product releases, festivals, and events. Thus, the major driving factors for Global Shopping Center Market are rising number of brands and rising purchasing power.

According to Statista, number of shopping centers in Japan has increased significantly, in 2012 there were 3096 shopping centers which have increased up to 2021. Moreover, adopting AI and biometrics in shopping centers is creating lucrative growth opportunities for the market over the forecast period. However, the high cost of Shopping Centers stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Shopping Centers Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. According to the regional analysis, North America will have the largest market revenue share in 2021. This can be attributed to increasing customer demand and regional retail industry growth. Rapid urbanisation in North America is driving up demand for green retail centres. Another factor fueling the expansion of shopping centres in this region is the fact that people prefer them because they are so handy and offer a wide variety of

goods. From 2022 to 2029, Asia Pacific is anticipated to have the greatest CAGR. The rise in demand for shopping malls is blamed on the middle-class populations in China and India having more disposable income. Retailers are also implementing AI and biometrics in shopping malls to draw customers and increase sales. Indians' rising standards of living, middle-class income, and desire to save money are driving up demand for shopping centres in the area, which is expected to produce the fastest CAGR during the forecast period.
