## **Abstracts**

Global Silica Sand Market for Glass Making is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Silica sand is the primary source of silicon dioxide which plays important role in the manufacture of glass. For Silicon dioxide to be suitable for producing glass, there must be a very high proportion of silica (above 95%) in the composition of the sand. Growing food & beverage packaging industry and rising glass consumption globally are key drivers for the growth of Silica Sand Market for Glass Making. According to International Finance Corporation (a member of the World Bank Group)'s -Strengthening Sustainability in the Glass Industry 2020 report- in 2019, the world consumed more than 194 million tons of glass, and demand is forecast to increase to 256 million tons by 2027, representing compounded annual growth of 3.5 percent. Also, with the growing food & beverage Packaging industry and increasing consumption of glass globally, the adoption & demand for Silica Sand is likely to increase the market growth during the forecast period. However, supply chain disruption owing to pandemic may impede the growth of the market over the forecast period of 2021-2027.
