Abstracts

Global Silicified microcrystalline cellulose Market is valued approximately USD XX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2027. Silicified microcrystalline cellulose (SMCC) exhibits superior inherent functionality and offers high intricate flow, compatibility and binding properties along with superior lubrication efficiency. Advanced methods and technologies such as silicified microcrystalline cellulose (SMCC) have been developed to improve the mechanical characteristics of the product. The method consists of a low-grade compressible product co-processed using Silicon Dioxide (SiO₂) as a companion excipient. Rising R&D investment in the pharmaceutical industry is driving the microcrystalline cellulose market. According to the International Federation of Pharmaceutical Manufacturers & Associations (IFPMA), total R&D investment in the pharmaceutical sector in the U.S. amounted to around USD 60 billion in 2016. It is projected to increase due to the increasing focus of manufacturers on product innovations and technological advances in order to gain a competitive edge. Volatile prices and availability of substitute products is the restraining factor. Market demand for Microcrystalline Cellulose (MCC) will see substantial growth in the food and beverage industry in the future due to its use to increase product shelf life by acting as a suspension stabilizing agent, which is an opportunity factor. As per Statista, Revenue in the Food market amounts to US\$7,488,160m in 2020 which is growing over the years while it was around US \$6 million in 2019.

The regional analysis of global Silicified microcrystalline cellulose market is considered
