## **Abstracts**

Global Single Colour Pad Printing Machines Market is valued at approximately USD XX million in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Single Colour Pad Printing Machine is a machine which is used to transfer a 2-D image via a silicon pad onto a 3-D object on any type of surface like flat, spherical, irregular or cylindrical. Single Colour Pad printing machine also prints photos or other types of materials such as lubricants and glue to the objects. Growing metal industry and increasing investment in the manufacturing of healthcare equipment have led to the adoption of Single Colour Pad Printing Machines across the forecast period. For Instance: as per the ISA (Indian Steel Association), India is currently the world's second-largest producer of crude steel, with 110.92 MT produced in 2018–19 (up from 103.13 MT in 2017–18). Also, with the Installed programmable logic system (PLC), auto pad cleaning system, the adoption & demand for Single Colour Pad Printing Machines is likely to increase the market growth during the forecast period. However, a long time to complete one printing cycle impedes the growth of the market over the forecast period of 2021-2027.

The regional analysis of global Single Colour Pad Printing Machines market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is the significant region across the world in terms of market share owing to increasing digital deployment across the industries in the region. Whereas, Europe is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as rising demand for addition of the new products in the product portfolio and expanding it by emphasizing research & development activities would create lucrative growth prospects for the Single Colour Pad Printing Machines market across North America region.
