Global Skeletal Dysplasia Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Skeletal dysplasia is a rare disease which manifests itself in over 450 different forms. It's usually considered osteochondrodysplasias. It has an impact on bone and cartilage growth and development. This condition can be so severe that it results in abnormal adult development or the death of newborns. Skeletal dysplasia is a rare condition that is challenging to diagnose. Slow growth, deformities such as a huge head, short upper arms or legs, twisted bones, arthritis, or joint pain are a few of the signs. The condition has a severe impact on infants, and early detection raises awareness. Defective genes, which may be inherited from ancestors or altered while a child is developing, cause this disorder. Identifying the mutant gene is another problem. Therefore, major companies are investing significantly in the research and development of treatments for this inherited disorder. The key factors such as rising prevalence of skeletal dysplasia, commercialization of novel drugs and presence of pipeline products and growing government expenditure on healthcare sector are anticipated to support the market growth during forecast period.

Moreover, the significant raise in prevalence of skeletal dysplasia and raise in adoption of skeletal dysplasia therapies is anticipated to create the lucrative demand for the market during forecast period. For instance, the prevalence of skeletal dysplasia is

predicted to be 2.4 per 100,000 newborns worldwide every day, according to a journal that was published on UpToDate. According to ultrasound screening, there are 7.5 cases of skeletal dysplasia per 100,000 pregnant women. Additionally, rising number of clinical trials and collaborative research for skeletal dysplasia treatment is anticipated to create lucrative opportunities for the market. However, the strict regulatory rules and high-cost stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Skeletal Dysplasia Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the dominating region across the world in terms of market share, owing to the substantial presence of major pharmaceutical and biopharmaceutical companies, presence of well-established healthcare infrastructure, high purchasing power, and rise in the adoption rate of skeletal dysplasia in the region. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period, owing to factors such as rise in pediatric population and increase in prevalence of skeletal dysplasia including achondroplasia, thanatophoric dysplasia, osteogenesis imperfecta, hypochondroplasia and others would create lucrative growth prospects for the Skeletal Dysplasia market across Asia Pacific region.
