Abstracts

Global Slow Speed Shredding Machine Market is valued approximately at USD 0.16 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6% over the forecast period 2021-2027. The slow speed shredding machines are used to shred any given material with reduced noise levels and power consumption. The increasing demand from industrial sector is driving the growth of the market. The stringent rules adhering to the waste management and recycling worldwide is also propelling the growth of the market. For instance: - North America has stringent regulations for the wastes management from industries and households which come under the Resource Conservation and Recovery Act (RCRA) and are governed by EPA. The objective is to protect the natural resource and energy through recovery, recycling, eliminating or reducing the waste. But the COVID-19 pandemic has disrupted the supply chain across major industries. Also, the higher cost associated with the product components is also a restraining factor for the market. Various shredders designed specifically for recycling materials such as scrap metal, plastic recycling, e-waste recycling, tire-shredding or wood recycling etc. will create new opportunities for the market.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are considered for the regional analysis of global Slow Speed Shredding Machine market. Europe is the dominating market in slow speed shredder market with almost 79% of share in the market in 2020. Rising regulations and objective of reducing waste in Europe will increase the growth of the market in the forecasted period. Latin American slow speed shredder market will display significant growth due to increasing

adoption of environmental regulations with rising government emphasis on reducing and recycling wastes.
