Abstracts

Global Small Cell 5G Network Market is valued approximately USD XX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2027. Low-power base stations that are used to expand network coverage and network availability are known as small cells, allowing end users to improve their wireless communication. These cells are often deployed to provide fast data services to consumers in indoor and outdoor environments. In 5G networks, the small cell network may play a key role. 5G network providers are currently more focused on the introduction of small cells under the low-frequency band to provide subscribers with increased bandwidth services. The use of small cell networks for mmWave is projected to grow in the later stage of 5G rollout post-2021-2022, as operators are expected to massively deploy small cell technologies for Internet of Things (IoT) and Machine-to-Machine (M2M) communications. The deployment of the next-generation Radio Access Network (RAN) has raised as the ever-growing demand for fast mobile data connections among customers. In commercial, manufacturing, and residential applications, the implementation of small cell 5G networks is growing increasingly to provide improved coverage capability at a low-price rate. The mobile data traffic is exponentially growing and encourages wireless providers to switch to network densification to provide mass users with high-speed bandwidth, globally. According to Statista, global mobile data traffic is projected to expand by more than 77.5 exabytes per month by 2022, more than 50 percent of which will be carried by the 5G

network. However, poor backhaul connectivity is the major factor restraining the growth of global Small Cell 5G Network market during the forecast period.

The regional analysis of global Small Cell 5G Network market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world owing to the rise in strategic trails to launch 5G technologies and equipment in this region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
