Abstracts

Global Smart Agriculture Market is valued approximately at USD 13.15 Million in 2020 and is anticipated to grow with a healthy growth rate of more than 10.6% over the forecast period 2021-2027. Smart agriculture refers to managing the farms by using technologies such as IoT, robotics, drones and Artificial intelligence to increase the quantity and quality of products while optimizing the human labor required by production. The global Smart Agriculture market is being driven by increase in agricultural productivity and rapid technological development across the world. Furthermore, rise in adoption of vertical farming and increase in public-private funding and partnership, will provide new opportunities for the global Smart Agriculture industry. For instance, according to Indian brand equity foundation, in India, the total food grain production in year 2020 was recorded at around 296.65 million tons which is up by about 11.44 million tons as compared to the production of year 2019 which was 285.21 million tons. Also, the government aims to purchase around 42.74 million tons from the central pool in year 2021. As a result, increase in agriculture activities owing to rising population will necessitate the integration of smart technologies in agriculture this propelling the Smart Agriculture industry forward in the future. However, lack of skilled workforce to operate smart agricultural technologies and high investment cost owing to deployment of expensive system in smart agriculture, may impede market growth over the forecast period of 2021-2027.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key regions considered for the regional analysis of global smart agriculture market. Growing

government initiatives and regulations to enhance the agriculture industry in the region makes North America the leading region across the world in terms of market share. Whereas Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to the growing government support and rising awareness among cultivators in the region.
