## **Abstracts**

Global Smart Traffic Camera Market is valued approximately at USD 10.98 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 14.60% over the forecast period 2023-2030. A smart traffic camera is primarily used for surveillance, to increase public safety, and to maintain a smooth flow of traffic. These intelligent cameras are positioned on arterial roads, motorways and highways that are connected by optical fibers. They have a sensing device that records a video stream, detects real-time traffic information and sends the compressed data to a network node and a monitoring center. The increasing number of road accidents and traffic congestion in the emerging economies are the factors acting as drivers fueling the market growth.

Additionally, governments and transportation authorities are placing greater emphasis on road safety measures. Smart traffic cameras equipped with features such as license plate recognition, speed detection and automated violation detection help enforce traffic regulations, deter reckless driving and improve overall road safety. According to the World Health Organization, the Decade of Action for Road Safety 2021–2030 was formally proclaimed by the UN General Assembly in September 2020 with the audacious goal of averting at least half of traffic-related fatalities and injuries by 2030. A

Global Plan for the Decade of Action was created by WHO and the UN regional commissioners in collaboration with other members of the UN Road Safety Collaboration and released in October 2021. Moreover, growing adoption of analytics software and an increase in the number of smart city projects in developing economies are anticipated to provide lucrative potential for market growth over the course of the projected period. However, factors such as high equipment installation costs and security risks & hacking difficulties are anticipated to restrain the market growth.

The key regions considered for the Global Smart Traffic Camera Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 as the region, has been at the forefront of technological advancements, including the development and implementation of smart traffic camera systems. The region has a strong base of technology companies, research institutions, and innovation hubs, fostering the development of cutting-edge technologies in the transportation sector. Asia Pacific is expected to grow significantly during the forecast period, owing to rising number of vehicles, and active participation of government organizations to oversee traffics rules and regulations in the market space.
