Abstracts

Global Smart TV Market is valued at approximately USD 424 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 17% over the forecast period 2020-2027. Smart TV (also known as connected TV) is a conventional television set that primarily integrated with internet and interactive web 2.0 features, which allows the consumers to stream music and videos, browse the internet, and view photos. The advent of Smart televisions have changed the overall conventional television industry by providing a comprehensive range of advanced features through using internet-connected services. Smart TVs have Wi-Fi connection capabilities or an ethernet port that allow the consumer to remain connected to the internet. These devices often allow the users to find and play movies, TV shows, videos, photos, and any other content from the Web, cable TV channel, or a local storage device. Therefore, the utility for Smart TV is significantly growing all over the world. Furthermore, the rising penetration of the internet and smartphones around the world, along with the advent of 4k, 8k, and ultra-high-definition (UHD) TVs are the few factors responsible for the CAGR of the market during the forecast period. According to the PubMatic, there were 3.04 billion mobile internet users were registered in 2018 and is expected to rise to almost 3.71

billion by 2022. Similarly, as per the survey, it is estimated that China has 765.37 million internet users in 2016 and is reached nearly 829.0 million in 2019 (as of March). This, in turn, is likely to strengthen the demand for Smart TV, globally. Moreover, the recent outbreak of COVID-19 around the world has adversely affected the consumer electronics industry as the manufacturing operations are temporarily suspended due to the lockdown imposed by the government, which has led to the unavailability of adequate raw material and causes a slowdown in the production. Also, the government has restricted the movement of goods, services, and people to prevent the spread of novel coronavirus, which caused a shortage in demand for Smart TVs, and thus, inhibiting the growth of the market at least in recent years. However, the rise in Over the Top (OTT) service is one of the major factors impeding the market growth over the forecast period of 2020-2027.

The regional analysis of the global Smart TV market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia-Pacific is the leading/significant region across the world in terms of market share owing to the surging demand for 4K and 8K TVs, along with the presence of a significant number of manufacturers in the region. Whereas Asia-Pacific is also anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027, due to rising internet penetration and increasing disposable income of the emerging economies, such as India and China.
