Global Smart Wiring Devices Market is valued at approximately USD 8.1 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 11.9% during the forecast period 2023-2030. Smart wiring devices are electrical components that have integrated advanced technologies, enabling them to communicate, interact, and be remotely controlled or automated. These devices have features such as wireless connectivity, sensors, and smart functionality. Smart wiring devices are often part of a larger smart home or building automation system, allowing users to monitor and control their electrical infrastructure through smartphones, tablets, or voice commands. The Smart Wiring Devices Market is expanding because of factors such as rising adoption of smart homes, growing demand for smart cities and growth of the Internet of Things (IoT).

Smart wiring devices offer homeowners the convenience of controlling and monitoring their home environments remotely. The ability to adjust settings, schedule tasks, and receive real-time updates enhances comfort and convenience, contributing to the growing popularity of smart homes, resulting in market growth. According to Statista, the global number of smart homes in the year 2019 reached 191.4 million which increased to 307.82 million in the year 2022 and it is projected to reach 672.57 million by the year 2027. Thus, rising development and adoption of smart homes are driving the market growth. In addition, rising industrialization automation and rising integration of AI capabilities into smart wiring devices are creating new opportunities for market growth. However, the high installation cost of Smart Wiring Devices stifles market growth

throughout the forecast period of 2023-2030.

The key regions considered for the Global Smart Wiring Devices Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing rising development of smart homes, rising technological advancement, rising government support for the industrial automation, and rising smart city initiatives in the region. Whereas, Asia Pacific is projected to grow at the fastest rate owing to factors such as rising construction of industrial buildings, rising urbanization, and development of smart homes in the region.
