Abstracts

Global smoke alarm market is valued approximately at USD 1.6 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 9.2% over the forecast period 2020-2027. Smoke detectors in residential and non-residential buildings are used to identify the presence of smoke. They are mounted mainly on ceilings or walls, as the smoke generated mainly travels upwards, being lighter than the indoor air. When smoke is detected, a smoke alarm is triggered to alert the occupants to life-threatening fatalities and property loss due to fire hazards. The market drivers are the increasing initiatives and support from govt. bodies and increased fire expenditure of enterprises. There has been technological advancement and innovations in smoke detectors and networking which is one of the major driving factors. According to SRD, The results of a survey conducted in the United States in 2017 on the amount spent on connected smoke

detectors showed that some 16 % of respondents reported spending more than \$500 on connected smoke detectors. There is rapid development of smoke detectors technology with Internet of things which is the great opportunity in this market. High cost is involved in replacing traditional smoke detectors with smart smoke detectors is the restraining factor in this market. As per NFPA, The death rate per 1,000 reported home fires was more than twice as high in homes that had no working smoke alarms (12.3 deaths per 1,000 fires), either because there was no smoke alarm or there was an alarm but did not operate), as it was in homes with working smoke alarms (5.7 per 1,000 fires).

The regional analysis of global smoke alarm market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share. Asia Pacific, due to its increasing population and real estate and infrastructure sectors, is expected to be the fastest growing region. National Association for Fire Protection (NFPA) reports, U. S. was caused by fires in homes with no working smoke alarms (17 percent) or no smoke alarms (40 percent), about three out of every five home fire deaths.
