Abstracts

Global Soybean Derivatives Market is valued approximately at USD 201.9 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.79% over the forecast period 2021-2027. Soybeans are a type of legume largely produced in East Asia, widely grown for their edible grains. They contain large amounts of protein, vitamins, minerals and phytic acid. Soybeans and its derivatives have a number of end-uses in the food and beverage industry such as vegetable oil, packaged meals, animal nutrition, etc. Rapid growth in food and beverage industry coupled with increased consumption of protein is driving the market growth. According to Statista, the worldwide consumption of protein in 2020 was over 342 million metric tons, in which, soybean was one of the major protein meals. Growing demand for animal protein products and overall growth in animal feed industry is also expected to fuel the market growth. Also, development of new soy derivatives will open up new opportunities for the market. However, low shelf life of soybean and health concerns related to excessive consumption of soybean derivatives may impede the market growth over the forecast period.

The regional analysis of the global soybean derivatives market includes key regions such as Asia Pacific, Europe, North America, Latin America, and Rest of the World. Asia Pacific dominates the market in terms of market share due to growing demand and adoption of soybean products in the region. However, North America is estimated to exhibit the highest CAGR over the forecast period due to rising demand from the food

and beverage industry and abundance of soy crops in the region.
