## **Abstracts**

Global Space Launch Services Market is valued at approximately USD 12.64 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 14.60% during the forecast period 2023-2030. Space launch services are a comprehensive range of activities involved in launching payloads, such as satellites, spacecraft, and other cargo, into space. These services encompass everything from the design and construction of launch vehicles to the actual launch operations and post-launch support. Space launch service providers offer tailored solutions to meet the diverse needs of their clients, which can include government space agencies, commercial satellite operators, scientific organizations, and even private individuals or companies. The Space Launch Services Market is expanding because of factors such as increasing demand for satellite deployments, the rise of reusable launch vehicles and rising government funding for space programs.

The growth of the Space Launch Services Market is significantly propelled by the increasing government expenditure on space programs worldwide. Governments, driven by strategic, scientific, and economic interests, are allocating substantial budgets for space exploration, satellite deployment, and related initiatives. According to Statista,

Government expenditure on space programs worldwide in the year 2018 stood at USD 70.8 billion which increased to USD 103 billion in the year 2022. As a result, governments are increasingly relying on commercial space launch services to fulfil their space exploration objectives. The collaboration between government space agencies and private launch service providers has become a common trend, leveraging the expertise and capabilities of both sectors and resulting in market growth. In addition, innovations in launch vehicle technologies and the rapid growth of the small satellite industry are creating new opportunities for market growth. However, the stringent regulatory requirements hamper the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Space Launch Services Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022. The regional market is significantly influenced by Government and military requirements, especially concerning national security, defense, and intelligence gathering, are crucial factors driving the demand for space launch services. The U.S. Department of Defense heavily relies on space-based assets to facilitate communication, surveillance, reconnaissance, and GPS navigation, creating a consistent need to deploy and maintain satellites in orbit. North America leads the way in technological advancements in space launch capabilities, continually innovating rocket designs, propulsion systems, and manufacturing techniques to enhance the efficiency and cost-effectiveness of launch operations. In the Asia Pacific region, particularly, there is anticipated rapid growth in space exploration and satellite technology. Nations such as China, India, Japan, and South Korea recognize the strategic and economic advantages associated with space endeavors. The Indian Space Research Organization (ISRO) has emerged as a significant player in this domain, achieving notable milestones with successful Mars and lunar missions. The Indian government's unwavering support for space research and development has fostered a robust launch ecosystem, attracting both domestic and international customers. The increasing demand for small satellites, including CubeSats and microsats, is a key driver propelling the growth of the space sector in the region.
