Abstracts

Global Spandex Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Spandex is a fiber which is composed of 85 percent polyurethane by weight. These fibres are commonly employed because of their excellent elasticity. Lycra, Numa, Spandelle, and Vyrene are all trademarked fibres in this category. The increasing technological advancement by the key market players has led the adoption of Spandex across the forecast period. Huafon Chemical's Zhejiang Manufacturing Standard issued Colored Spandex Filament T / ZZB 2535-2021 in November 2021. The standard establishes higher standards for the production and inspection of coloured spandex filaments in four areas: exceptional quality, independent innovation, and cost-effectiveness. Also, with the rapidly growing population combined with rising consumer disposable income, the adoption & demand for Spandex is likely to increase the market growth during the forecast period. However, increasing threat of substitutes might impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Spandex Market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific is the significant region across the world in terms of market share owing to the manufacturer's corporate business in Asian countries or the high disposable income of consumers. Whereas, North America is anticipated to exhibit highest growth rate over the forecast period 2022-2028. Factors such as rising disposable income, shifting preference towards the importance of spandex among clothing manufacturers would create lucrative growth prospects for the Spandex Market across Asia-Pacific region.
