Global Spirometer Market is valued approximately USD 719.2 million in 2019 and is anticipated to grow with a healthy growth rate of more than 11.1 % over the forecast period 2020-2027. Spirometers are medical equipment that determine the air capacity of the lungs by measuring the volume of air exhaled and inhaled. Spirometer generates a pneumotachograph, which helps to monitor the performance of the lungs and diagnose patients with respiratory-related problems. Spirometers are used by research & development facilities, physicians, as well as patients for personal use for the diagnosis of chronic obstructive diseases, asthma, tuberculosis, silicosis, cystic fibrosis, black lung, and other respiratory diseases. The global Spirometer market is highly in demand due to the coronavirus pandemic which caused increased incidence on respiratory diseases across the world. The rising incidence of respiratory diseases, technological shift towards smartphone-based data collection and growth in the geriatric population are the few factors responsible for growth of the market over the forecast period. For instance: as per statista, the American geriatric population (65 years old or more) was 16% in 2018 and is anticipated to rise by 22 % of American geriatric population in 2050. However, time required to perform tests is the major factor restraining the growth of global Spirometer market during the forecast period.

The regional analysis of global Spirometer market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world owing to the increasing incidence of chronic respiratory diseases and the rising adoption of technologically advanced devices in the region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
