Abstracts

Global Spray Dried Food Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than 4.11% over the forecast period 2022-2028. Spray dried foods are made utilizing a spray drying technology that turns liquid food into a dry form by rapidly drying it with hot gas. The colour and aroma of spray dried food products do not change, and it aids in the preservation of the food's texture. The spray drying process is most employed in the dairy and coffee industries. When compared to freeze dried foods, spray dried foods are less costly. The market growth is driven by key factors such as high demand from dairy industry and growing demand for naturally preserving foods. As per Statista, the global dairy industry was valued at over USD 720 billion in 2019, and it is expected to increase to USD 1,032 billion by 2024. Furthermore, growing strategic investments such as product launches and partnerships across the globe, propel the market opportunities for spray dried food. For instance, Nestle Inc., a Swiss food, and beverage giant invented a new porous, 'structured' sugar manufactured with spray drying in March 2018, allowing the company to reduce the sugar content of confectionery products by 30%. The new type of sugar dissolves to provide a sweetness like a significant amount of conventional sugar. However, high maintenance cost impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Spray Dried Food Market study include Asia

Pacific, North America, Europe, Latin America, and Rest of the World. North America is leading the market share globally, owing to increasing demand for spray dried food products. However, Asia Pacific is expected to be the fastest growing region due to growing consciousness about health and nutrition and rising population in the region.
