## **Abstracts**

Global Stadium Seating Market is valued at approximately USD 1.73 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 1.7% over the forecast period 2022-2029. Stadium seating is a characteristic seating arrangement that ensures an ideal viewing experience. The stadium seating has complex engineering that enables the seats to fold or retract, which is a convenient mode for cleaning or accommodating viewers. The rising expenditure on stadium infrastructures and increasing government support to the sports industry are the factors that are driving market growth across the globe.

In addition, the increasing disposable income is fostering market growth owing to the growing trend of gaining live experience of recreational activities or events. The Federal Statistical Office estimates that in Germany, disposable personal income was USD 516.23 billion (EUR 504.54 billion) in 2019, and that climbed to USD 544.47 billion (EUR 532.14 billion) in 2022. Thereby, the increasing disposable income of the population is directly associated with the growth of the market. However, the growing threat of security acts and contingency of events are hindering the market growth throughout the forecast period of 2022-2029. The development of new seating technology, as well as the rising number of initiatives by the key market players, are creating lucrative prospects for market growth in the forthcoming years.

The key regions considered for the Global Stadium Seating Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the growing demand for a wide range of sports activities and competitions, along with the rising interest of people in sports. Whereas, the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as increasing population, growing construction of new stadiums, as well as economic development in the regional market.
