Abstracts

Global Styrene Maleic Anhydride (SMA) Copolymer Market valued approximately USD 438.5 million in 2018 is anticipated to grow with a CAGR of 10.72% over the forecasted period of 2019-2026. Styrene maleic anhydride is a synthetic polymer that is built-up of styrene and maleic anhydride monomers. The monomers can be almost perfectly alternating, making it an alternating copolymer, but (random) copolymerization with less than 50% maleic anhydride content is also possible. The polymer is formed by a radical polymerization, using an organic peroxide as the initiator. The main characteristics of SMA copolymer are its transparent appearance, high heat resistance, high dimensional stability, and the specific reactivity of the anhydride groups. The latter feature results in the solubility of SMA in alkaline (water-based) solutions and dispersion. The market growth is primarily driven owing to escalating adoption by end user industries along with investments made by the private organizations considering the global scenario.

The regional analysis of Global Styrene Maleic Anhydride (SMA) Copolymer Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the fastest growing region across the world in terms of market share.
