Global Submarine Telecom Cable Market is valued approximately at USD 11.7 Billion in 2019 and is anticipated to grow with a CAGR of 11.10% over the forecast period 2020-2027. Submarine Telecom Cable is a cable placed on the bed of the waterbodies present between two stations on land to transmit and receive the telecommunication signals from both ends. Submarine Telecom Cable is made up of optical fibre technology in order to transmit digital data with data privacy being maintained. A vast telecom submarine cable network is being setup to connect communication among countries. For Instance: As per analysis by International Cable Protection Committee in 2017, around 39,000 Km distance is covered by SEA-ME-WE-3 submarine cable connecting 33 countries across 4 continents. Major companies such as Amazon, Apple, Google and Microsoft make high investments for the development of communication network and outpace Internet backbone providers across the globe leading to the market growth. Further, rise in the demand for high internet connectivity highly boosts the demand for submarine cables. Customer's requirement to enable high efficiency services with surge in the speed of data connectivity results in the high demand for higher bandwidth transmission. For Instance: As per Statista in April 2020, online penetration rate is 59% of the world population motivating digital acceptance and rise in the use of internet utilization. However, complexity in installation and its high costs involved along with complexity in maintenance are the major factors restraining the growth of Global Submarine Telecom Cable over the forecast period of 2020-2027.

The regional analysis of global Submarine Telecom Cable market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the

World. Asia Pacific is the leading/significant region across the world due to increase in internet penetration. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rise in the need to enhance telecommunication networks along with rising demand for high efficiency services would create lucrative growth prospects for the Submarine Telecom Cable market across Asia-Pacific region.
