Global Subsea Manifolds Market to reach USD 5 billion by 2025.

Global Subsea Manifolds Market valued approximately USD 3.35 billion in 2016 is anticipated to grow with a healthy growth rate of more than 4.45% over the forecast period 2017-2025. Manifolds are connecting systems that are elementary units for infrastructure in the deep-sea oil production projects. Subsea infrastructures require manifolds for connecting wells to pipelines and risers, onwards to reach floaters, platforms and other facilities. The application of manifolds lies in merging the flow from the multi-well template and transferring the flow to production flowlines and for managing the distribution of injected water, gas, and chemicals. Any field that is under development process to produce oil from the subsea beds provide the market for subsea manifolds. Manifolds are amongst the greatest cost-effective and operation efficient systems of the development of oil fields while diminishing the demand for subsea pipelines and risers. Subsea manifolds are designed to combine, distribute, control and monitor the flow of fluids from the wells.

The global subsea manifold market is anticipated to witness remarkable growth during the forecast period. Europe region is expected to dominate the market with the largest market share in the forecast period. In April 2018, Norwegian oil major Statoil started the installation of the first topside for the Johan Sverdrup field development offshore Norway. A higher number of projects in the deep locations in North Sea, are likely to enhance the market for subsea manifolds. North America region is likely to follow the market share with discoveries in the Gulf of Mexico
