Abstracts

Global Sulfur Bentonite Market is valued approximately USD 1 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.6% over the forecast period 2021-2027. Sulfur bentonite is primarily used to nourish the soil and helps in bringing back the lost nutrients and fertility of the same. It is used in the cultivation of oilseeds, cereals, crops, fruits & vegetables and many more. Increase in demand for sulfur-based manures for agriculture and increasing demand of varied oilseeds worldwide are factors contributing to the market growth. For instance: according to Statista, approximately 362 million metric tons of soyabeans, 68.87 million metric tons of rapeseeds, 49.46 million metric tons of sunflower seeds and 47.79 million metric tons of peanuts were produced during the year 2020-2021. With an increasing production and consumption of the oil seeds, there will be an increase in demand for Sulfur Bentonite in the long run. However, improper waste management system and lack of soil fertility coupled with soil overflow impedes the growth of the market over the forecast period of 2021-2027. Also, increasing availability of raw materials and increasing government initiatives for soil improvements and agricultural activities is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Sulfur Bentonite market includes Asia Pacific, North America, Europe, Latin America and Rest of the World for analysis and estimation, Asia Pacific is a significant region in terms of market share across the world owing to increasing awareness towards sulfur-based manures Whereas, Latin America is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as increasing demand for crops and oil seeds would create lucrative

growth prospects for the Sulfur Bentonite market across Latin America region.
