## **Abstracts**

Global Surface Vision and Inspection Market is valued approximately USD 2.41 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7.8% over the forecast period 2022-2029. For the monitoring of surface, ongoing inspection, and surveillance implementations, surface vision and inspection systems can be used. Surface vision and inspection look for joints, textures, holes, cracks, scratches, and dents that occur during production and international shipping. All manufacturing processes now include quality management systems (QMS), which is common across all industries. To preserve consistency in design and development, manufacturers of automobiles, steel, semiconductors, and other products are progressively embracing QMS. Along with this, rise in pharmaceutical and semiconductor manufacturers over the world is driving the growth for the market over the forecasted period. Moreover, technological advancement in the surface vision and inspection market is creating lucrative growth opportunity in the market. Integration of AI with surface vision and inspection is driving the growth for the market.

For instance, camera manufacturing company JAI A/S based in Denmark company provides cameras to the pharmaceutical industry for detecting missing tablets, broken blister sealing, etc. to maintain quality assurance. The cameras are integrated with 3-sensor imaging technique that provides precise spatial resolution and accurate edge detection which helps to address/resolve smaller problems. However, the shortage of

technically skilled persons is restraining the market growth over the forecast period of 2022-2029.

The key regions considered for the Global Surface Vision and Inspection Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the space in terms of revenue, the expansion can be attributable to rising demand from pharmaceutical and cosmetic companies. The government has adopted a sophisticated inspection system as a result of its severe product quality standards. The food and beverage business are embracing machine vision technology, which is assisting participants in increasing production efficiency, quality, and safety. Asia Pacific is expected to grow significantly during the forecast period, owing to the growing demand for surface vision & inspection systems is being driven by elements including the quick industrialization of developing nations, the existence of significant semiconductor, electronics, and automotive manufacturers, and the creation of quality standards regulations. Additionally, growing assembly line investment together with the industry's approach to factory automation to achieve high efficiency & minimize human error is supporting industry growth in the area.
