## **Abstracts**

Global Surgical Retractors Market is valued at approximately USD 1.5 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 3.6% over the forecast period 2020-2027. Surgical retractor is a type of surgical instruments which are actively used during the surgical procedure performed by the surgeon. They are also recognized as a surgical detractor, and these instruments can be accessible in a range of sizes, shapes, and styles based on the surgeries and their uses in the surgical operation. These instruments are typically used to split the edges of wounds or surgical incision. They help in holding back the essential organs or tissues that allow surgeons easy access and better visibility to the exposed area. These instruments are used manually or through a mechanical method while executing surgical procedures. Presently, there are various types of surgical retractors available in the market, including hand retractors, self-retaining retractors, and table-mounted retractors and are used in surgical operations as they can support in the treatment of different surgeries. Therefore, these factors are promoting the use of surgical retractors all over the world. Furthermore, increasing the number of surgeries in the developed & developing nations, growing geriatric population and the introduction of novel devices such as illuminated, single-use, and laparoscopic retractors are the few factors responsible for the CAGR of

the market during the forecast period. According to the International Society of Aesthetic Plastic Surgery (ISAPS), there were around 10,607,227 surgical procedures performed in 2018, representing an increase of 15% from 2014, which holds almost 9,018,375 surgical procedures. This, in turn, is expected to accelerate the market growth around the world. Although, the recent outbreak of COVID-19 pandemic around the world initiating the shutdown of much-civilized life, which resulted that medical device companies are highly insulated from economic disruptions due to which demand for surgical retractors are greatly affecting. This is due to the healthcare facilities and organization are mainly focused on treating patients with COVID-19, and thus, surgical procedures are likely to put on hold. Therefore, this factor will be negatively influencing the market growth at least in this year. However, the high cost of the instrument and changing consumer interest towards minimally invasive surgeries are the major factors impeding the market growth over the forecast period of 2020-2027.

The regional analysis of the global Surgical Retractors market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia-pacific is the leading/significant region across the world in terms of market share owing to the rising surgical procedures, and the presence of a significant number of manufacturers in the region. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027.
