## **Abstracts**

Global Surgical Scissors Market is valued at approximately USD 316.84 million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Surgical scissors are surgical instruments that are specially designed to cut tissues on the inside or at the surface of the human body during surgeries. Surgical scissors are made with a variety of materials including tungsten, stainless steel, ceramic, and others, which are highly adopted in various medical applications. Factors such as the increasing incidences of chronic diseases, accidents, burns, and trauma cases, coupled with the rising inclination towards minimally invasive surgeries are propelling the market demand across the globe.

In addition, the rise in the number of surgical procedures plays a significant role in the market demand because of the surging need for high-quality sharp-edged instruments by medical specialists for precise cuts and incisions. According to a National Health Library report, in May 2021, it was estimated that there were 5000 surgeries were performed per 100,000 people annually in India. Likewise, as per the International Society of Aesthetic Plastic Surgery (ISAPS), Global Survey Results in 2020 report, there were about 10,129,528 cosmetic surgical procedures were carried out in 2020. Therefore, the rising growing expenditure on various surgeries is accelerating the growth of the market. The rising preference for advanced surgical techniques, as well as

increasing technological advancements, are presenting various lucrative opportunities for market growth in the forecasting years. However, the dearth of skilled professionals and low investments in developing and underdeveloped economies stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Surgical Scissors Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the increasing investment in healthcare facilities, rising surgical procedures, and the presence of skilled professionals. Whereas, the Asia Pacific is expected to grow at the highest growth rate over the forecasting period. Factors such as increasing healthcare tourism, an increase in the prevalence of chronic diseases, as well a growing focus on the development of healthcare infrastructure are burgeoning the market growth in the forecasting years.
