Abstracts

Global surgical staplers market is expected to reach \$6.8 billion by 2027. Global surgical staplers market is valued approximately at \$4.2 billion in 2020 and is anticipated to grow with a healthy growth rate of about 7.2% over the forecast period 2021-2027. Surgical staplers refer to the specialized staplers that are used in surgical procedures for closing skin wounds, remove or join parts of lungs or the bowels. Such staplers are preferred over conventional sutures as these are faster, easier, accurate, as well as convenient to use. The global surgical staplers market is being driven by increasing number of surgical procedures and growing preference for minimally invasive surgery. Furthermore, growing popularity of cosmetic surgeries will provide new opportunities for the global surgical staplers industry. There has been an increment in the popularity for cosmetic surgeries across the globe which is expected to increase the demand for surgical staplers. For instance, according to Statista, global cosmetic surgery and procedures amounted to nearly \$26.3 billion in 2016 which is expected to increase and reach up to about \$46 billion by 2026. This is expected to drive the market by increasing the requirement for surgical staplers. However, availability of alternative wound care techniques may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global surgical staplers market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region across the world in terms of market share due to increasing incidences of diseases, growing geriatric population, increasing preference for cosmetic and bariatric surgeries, etc. in the region. Whereas Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027 due to growing medical tourism, healthcare infrastructure development, etc. across the region.
