Abstracts

Global Surgical Table Market is valued at approximately XX in 2021 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2022-2028. A surgical table is where patients relax while undergoing surgery. This surgical equipment is typically seen in a hospital's operating room. There are numerous tabletops that can be utilised for both general surgery and specialised procedures. The increased number of surgeries worldwide is a major contributor to the market's expansion. This is attributed to an increase in trauma and injury cases around the world. Furthermore, the rising global burden of chronic disease is one of the key causes driving up demand for surgical tables, as end-stage chronic disorders often necessitate surgery. According to Dementia Australia, around 459,000 Australians were living with dementia in September 2020, and nearly 1.6 million Australians were active in their care centre. The number of individuals living with dementia is anticipated to rise to 1.1 million by 2058, and dementia will become the country's second greatest cause of death within the next five years. However, the surgical table business may be hampered by a lack of competent experts to operate the complicated surgical tables and the high cost of composite surgical table. Additionally, rising hospital investments in surgical equipment are driving market growth.

The key regions considered for the global Surgical Table market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Over the forecast period, North America is expected to dominate the surgical table market. The favourable reimbursement situation in the United States, the growing preference for minimally invasive operations, and the increasing number of surgeries are the primary drivers driving the growth of the North American surgical tables market.
