Abstracts

Global Swine Feed Market is valued approximately at USD 100.2 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 3.5 % over the forecast period 2020-2027. Swine feed, also known as pig feed, is prepared from a range of nutrients from either plant or animal sources, mainly soy meal, maize, barley, wheat, sorghum, minerals, vitamins, other micronutrients, and antibiotics. Swine feed is available in the market in various formats, including mash, crumbs, and pellets. Swine feed in the form of pellets is the most common type among owners of swine farms. In addition, the growth in consumption of pork meat in developing countries is driving the market for pig feed in terms of sales value. For instance, Over 297 thousand metric tons of pork was consumed across India in 2020. This is because swine feed provides pigs with nutrients. In exchange, this has powered the growth of the swine feed industry in terms of volume sales. Further, Pork is one of the most consumed meats in the world. For instance, as per Statista, the highest meat per capita consumption in North America was in the period from 2016 to 2018, with approximately 95 kilos per person. In addition, the increasing incidences of disease outbreaks due to the consumption of contaminated pork meat has affected the demand for improved feed for pigs that optimizes pig health. However, High price volatility for feed preparation raw materials and additives implies the growth of the market over the forecast period of 2020-2027. Also, it provides several nutritional advantages because swine feed is high in fiber, vitamins, and minerals which leads to generate more opportunities for global swine feed market.
