## **Abstracts**

Global Systematic Review Management Software Market is valued approximately USD 323.4 million in 2023 and is anticipated to grow with a healthy growth rate of more than 6.20% over the forecast period 2024-2032. Systematic Review Management Software is a type of software designed to assist researchers in conducting systematic reviews efficiently and effectively. Systematic reviews are comprehensive, structured assessments of existing literature on a particular topic, aimed at synthesizing evidence to answer specific research questions. Furthermore, growing emphasis on evidence-based practices are gaining attention towards Global Systematic Review Management Software Market. The research landscape is becoming increasingly complex, with a growing volume of literature being published each year. Navigating this vast amount of information manually is time-consuming and prone to errors. Systematic review management software streamlines this process by providing tools for efficient literature search, screening, data extraction, and analysis.

The Global Systematic Review Management Software Market is driven by expansion of research and development activities and proliferation of scientific publications across the world. There is a growing emphasis on transparency and reproducibility in research practices. Systematic review management software allows researchers to document and track each step of the review process, increasing transparency and repeatability. Especially in the realm of growing concern about research integrity and the replication problems across multiple scientific domains. In addition, Scientific publications come

from diverse sources and cover a wide range of topics, methodologies, and geographic regions. Systematic review management software helps researchers navigate this complexity by providing tools for efficient literature search, screening, data extraction, and analysis, enabling them to identify relevant studies and synthesize evidence more effectively. However, high development cost of systematic review management software and lack of expertise is going to impede the overall demand for the market during the forecast period 2024-2032.

The key regions considered for the Global Systematic Review Management Software market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. In 2023, North America was the largest regional market owing to factors such as rising number of research initiatives and educational institutions embracing digital transformation, and growing numerous universities and research institutions across the region. Digital transformation initiatives often focus on improving efficiency and productivity in research processes. Systematic review management software automates repetitive tasks, such as literature screening and data extraction, saving researchers valuable time and resources. This allows researchers to focus more on analysis, interpretation, and decision-making, thereby enhancing overall productivity. Furthermore, the market in Asia Pacific, on the other hand, is expected to develop at the fastest rate over the forecast period.
