Abstracts

Global Tank Cleaning Service Market is valued approximately at USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2020-2027. The available capacity of the tank is limited by the amount of the sludge. The tank operator must then clean the tank in order to restore its full capacity. In addition, national inspection regulations require a leak test every five or ten years (double floor). To carry out this inspection, the tank must be completely drained and cleaned. Repair work is often done on this occasion. The petrochemical industry and the tank terminals are increasingly choosing the option of automated instead of manual tank cleaning. Moreover, rising crude oil production globally has led to widespread use of transportation tank to export and import crude oil across various economies which further tends to increase the market share of tank cleaning service over the forecast period. For instance, total world oil production in 2019 averaged 80,622,000 barrels per day. Approximately 68% came from the top ten countries, and an overlapping 44% came from the fourteen current Organization of the Petroleum Exporting Countries (OPEC) members in 2018. Crude oil production in the United States has seen a significant increase as the exploration and extraction of oil from its plentiful shale reserves has increased, leading to the largest ever annual increase in a single country. This was due to various new projects, persistent demand for oil and higher prices (USD 14 per barrel higher than in 2017). Oil demand has also started to increase in Russia, the Middle East (with the exception of Iran) and Africa. Further, growing refinery industry in emerging economies such as India, China, Brazil coupled with the rising export and import of refinery products enhanced the market growth over

the forecast period (2020-2027). For instance, according to India Brand Equity Foundation (IBEF), India is expected to be one of the world's largest contributors to non-OECD oil consumption production. Oil imports grew dramatically to USD 87.37 billion in 2017-18, up from USD 70.72 billion in 2016-17. India remains the world's third-largest oil user in 2017, producing 4.69 million barrels per day (mbpd) of oil in 2017, compared to 4.56 mbpd in 2016. According to India Brand Equity Foundation (IBEF), as of 1 December 2019, India 's oil refining capacity was 238.60 million tons, making it the second largest refiner in Asia. Private companies own about 35.36% of the total refining capacity.

The regional analysis of Global Tank Cleaning Service market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific region is expected to dominate the market share owing to the rising petroleum and refinery industry over the forecast period.
