Abstracts

Global Tattoo Removal Devices Market is valued approximately USD 128.46 million in 2021 and is anticipated to grow with a healthy growth rate of more than 9.6% over the forecast period 2022-2028. Tattoos are skin piercings that can be temporary or permanent. The majority of persons who get their skin tattooed are between the ages of 18 and 24. Permanent tattoo removal is a process for removing tattoos from the skin. Tattoo removal is accomplished using surgical, laser, cream, and other methods. Intense pulsed light (IPL) therapy, deep chemical peels, and Rejuvi are some of the other techniques available. To erase black and coloured tattoos, lasers such as the Q-switched Nd-YAG laser, the Q-switched Alexandrite laser, and the Q-switched ruby laser are employed. Some of the significant market growth drivers include an increase in demand for tattoo removal among both young and seniors due to tattoo regret, as well as a high desire for non-invasive or minimally invasive methods for aesthetic treatment. According to Astanza Lasers, roughly 45.0 million Americans have at least one tattoo, and nearly 21,000 tattoo parlours in the United States generate a potential tattoo removal patient every day, driving market demand dramatically. Furthermore, the average income per patient is around USD 1,400, and the market is expected to create tremendous prospects for market players and investors, with nearly 7 million people suffering from tattoo regret. Tattoo removal technologies are predicted to be in great demand due to the high occurrence of 'tattoo remorse' among millennials. According to a B&T MAGAZINE article, over 28.6% of females and around 29.7% of males want to get rid of their tattoos, while more than 35.0 percent of the population aged 18-21 regrets becoming inked. In contrast, between 2021 and 2027, the high cost of tattoo

removal operations would limit market growth.

The key regions considered for the Global Tattoo Removal Devices Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. The worldwide tattoo removal devices market was dominated by North America. Over the forecast period, the market is expected to increase at a significant rate. This is due to an increase in the number of tattoo parlours and the availability of improved tattoo removal equipment, as well as an increase in the number of people getting tattooed. Due to an increase in the number of people having tattoos in countries like Japan and India, Asia Pacific is expected to be the fastest-growing area over the projection period.
