Global Temporary Pacing Leads Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028.

The temporary cardiac pacing lead is two electrodes with a small catheter, and it is utilized when a patient's heartbeat slows down and cannot maintain the cardiac output. These leads are placed in the right ventricle of the heart via a vein in the neck or groin area and is linked to an external pacemaker to monitor and control the patient's heart rate. The growing prevalence of cardiovascular diseases and increasing inclination towards minimally invasive procedures as well as favorable initiatives from regulatory authorities are factors that are accelerating the global market demand. For instance, according to World Health Organization (WHO) - as of 2019, globally around 17.9 million people died from CVDs, witnessing for 32% of all global deaths. Of these deaths, 85% were due to heart attack and stroke. In addition, in May 2019 Menlo Park, USA based BioTrace Medical Inc. received CE certification for its Tempo Lead in Europe for use in cardiac procedures requiring temporary intracardiac pacing. Also, growing number of geriatric individuals and rising number of technological advancements in temporary pacing are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, health complications associated with temporary

placing leads impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Temporary Pacing Leads Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing number of geriatric individuals and presence of leading market players in the region. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as the rising incidences of cardiovascular diseases and surging healthcare infrastructure, would create lucrative growth prospects for the Temporary Pacing Leads Market across the Asia Pacific region.
