Abstracts

Global Temporary Power Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6.7% over the forecast period 2021-2027. A temporary power supply is a connection on site to provide power supply for construction work or building. It can be used for short duration power supply such as for events, mining ,manufacturing and shipping etc. . Rising power demand will enhance the market growth of temporary power market. For Instance: according to International Energy Agency, in 2021, power demand is expected to grow by 5% and 4% in 2022. It also states that electricity demand is expected to increase majorly from Asia pacific, especially from China and India. Lack of power infrastructure pushes the growth of global temporary power market. However, the expansion of grid infrastructure along with the increasing availability of power in emerging economies impedes the growth of the market over the forecast period of 2021-2027. Also, decreasing cost of power generation is likely to increase the market growth during the forecast period.

The regional analysis of global Temporary Power market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the significant region across the world in terms of market share owing to increase in power demand, capacity expansion plans and adoption by power companies. Whereas Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2021-2027. Factors such as low rate of electrification, and poor

power infrastructure, increasing demand for diesel generators would create lucrative growth prospects for the Temporary Power market across Asia-Pacific region.
