Abstracts

Global Textile Flame Retardants Market is valued approximately USD 519.6 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 3.9 % over the forecast period 2021-2027. Textile flame retardants are additives that prevent or slow down the flame spread rate in textiles.. The increasing demand for fire retardant fabrics from various end-use industries, such as defense, transportation, and industrial manufacturing has driven the market. In 2019, the polyester application had the highest revenue share of 39.5 percent, and this dominance is expected to continue during the projected period. Polyester can be used to complete flame retardants on textile fibres since it does not easily burn. However, the market is inclining towards the development of alternatives to chemical-based products which impedes the growth of the market over the forecast period of 2021-2027. Also, Upsurge in the demand for viscose/cellulosic and nylon-blended fibers is likely to increase the market growth during the forecast period.

Based on regional analysis, the Global Flame Retardant Market is grouped into Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific represented the largest market share in 2019, China represents the worldwide interest for fire retardants. This is attributable to the developing synthetics and auto industry in the country. India is additionally expected to expand its offer in the worldwide market dependent on expanding unfamiliar speculation which will bring about an expanding number of new ventures in the country. Also, the expanding utilization of plastics in vehicles gives extra freedoms to fire resistant interest.
