automation. In April 2018, CyberEdge signed a collaboration with Darktrace, a provider of innovation immune system technology. This collaboration will assist CyberEdge in providing cyber threat detection solutions to its customers while also enhancing CyberEdge's cyber security capabilities. With the increasing number of attacks on networks to gain unauthorized access to data, many businesses have begun to mandate Threat Detection Systems for cybersecurity. Through network traffic analysis, network control solution provider aid in the detection of malicious activity. It also provides multi-level assessment to control network operation. The main challenge for Threat Detection Systems is user ignorance. Many business owners are unaware of debugging technology, which increases the threat potential on the network. Other issues include a lack of control over terminal connectivity solutions, as well as a lack of secure boot such as SIEM (Security Information and Event Management) are factor that hinder the growth of market. Also, as the demand for robotics as a service application grows, adding sophisticated capabilities to existing infrastructure, rapid growth for biometric systems from telecommunications equipment and commercial establishments creates market opportunities.

Due to the extreme high digital transformation and advanced techniques such as cloud, mobile, and analytics within and between businesses, North America has the leading position for Threat Detection Systems. The widespread adoption of security and threat protection solutions is also assisting the Threat Detection System market to expand significantly. Corporations such as Cisco are also working to develop Threat Detection solutions through collaborations in this market in order to expand market opportunities. The market for Threat Detection System is expanding rapidly in Europe and Asia Pacific, owing to rising demand for connectivity monitoring and management solutions among businesses.
