## **Abstracts**

Global Thyroid Cancer Diagnostic Market is valued approximately at USD 2.4 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 5.5% over the forecast period 2020-2027. Thyroid cancer is a sort of cancer that usually arises when an unusual cell begins to grow up in the thyroid gland, liable for the secretion of thyroid hormones. This gland is typically found in the front of the neck. This cancer is extremely infrequent among the people. To precisely treat and diagnose thyroid cancer, healthcare professional generally reviews the entire medical history of a patient suffering from this cancer. However, this cancer might reoccur even after many years of the treatment, thus accurate diagnosis of thyroid cancer is required, which may contribute to the market growth around the world. Furthermore, the rise in the prevalence of thyroid cancer, along with the advancements & innovation in diagnosis technology are the few factors responsible for the CAGR of the market during the forecast period. For instance, as per the National Institute of Health (NIH), the rate of new cases of thyroid cancer is estimated at around 15.7 per 100,000 women and men each year. Also, the death rate estimated almost 0.5 per 100,000 women and men every year. Similarly, according to the American Cancer Society, about 52,890 new cases of thyroid cancer were estimated in 2020, of which nearly 41,170 in women and 12,720 in men. This, in turn, is expected to strengthen the need for thyroid cancer diagnostics, making a significant impact on the market growth all over the world. However, the high cost of diagnosis coupled with adverse effects of diagnosis are the

few major factors inhibiting the market growth over the forecast period of 2020-2027.

The regional analysis of the global Thyroid Cancer Diagnostic market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the increasing awareness among individuals and reimbursement policies, and the large presence of a significant number of market vendors in the region. Whereas Asia-Pacific is anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the growing prevalence of thyroid cancer along with the improving healthcare infrastructure in developing countries, such as China and India, would create lucrative growth prospects for the Thyroid Cancer Diagnostic market across the Asia-Pacific region.
